**PAL Camcorders**

In the U.S., the TV color system is known as NTSC, which uses 525 scan lines at 30 fps (frames per second). However, unlike PAL uses 625 scan lines at 25 fps.

So, while camcorders can record video anywhere in the world, its where that video is played back that makes a difference. PAL camcorders are designed to play back in countries that support the PAL color system—such as Europe, China, the Middle East, and South Africa. This means that these camcorders—with their different signals and frame rates—don't play back on American televisions.
