PRODUCT INFORMATION

The MagicBall ball head series is yet another example of NOVOFLEX's outstanding ability to develop innovative and practical accessories. There are three models in the MagicBall series – for different camera configurations with total weight from 5 to 10 kg. The ball heads provide an unbelievable positioning range of 120° in virtually any plane. All three models are easy to handle and compatible with practically any tripod. Part of the secret is the large, grippy point-and-fix handle. The handle is used to position the MagicBall exactly, then a simple twist fixes it firmly in place. On the larger models, designed for heavier equipment, adjustment is made easier by an integrated friction setting. This variable friction setting lets you match the camera weight to the adjusting force.

The outstanding design and use of only the finest materials blocks any vibration transfer. The knurled wheel makes for simple and safe camera mounting.

WITH COMPLIMENTS
